

PRASHANT LODHI

8171851402 | prashantlodhi1920@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

Dr. Bhim Rao Ambedkar University, Agra M.Sc. in Biotechnology | CGPA: 7.12/10 | 2022 – 2024

SKILLS

Programming Languages: Python, SQL

Analytical & BI Tools: Power BI, Advanced Excel, Power Query, DAX

Database: MySQL

Core Competencies: Data Cleaning, Exploratory Data Analysis, Data Modeling, Dashboard Building, Data Visualization, REST API Development

PROJECTS

Business Insight 360 – Enterprise Performance Dashboard *[Power BI | DAX | Power Query]*

[GitHub Repo](#)

- Built an interactive Power BI dashboard consolidating Finance, Sales, Marketing, Supply Chain, and Executive views for enterprise-wide performance monitoring.
- Modeled data and built DAX measures to surface Net Sales (\$7.05B) and Gross Margin (37.48%), uncovering a 14.65% net loss margin that exposed a gap between revenue growth and profitability.
- Tracked supply-chain forecast accuracy (68.12%) across products, customers, and segments to flag planning gaps for stakeholders.
- Enabled interactive drill-down filtering by benchmark, year, region, product, and customer to support self-serve executive analysis.

AtliQ Hotels – Occupancy & Revenue Analysis *[Python | Pandas | Matplotlib | Jupyter]*

[GitHub Repo](#)

- Performed end-to-end EDA on ~134,500 hotel booking records across 4 cities to diagnose declining market share and revenue for a 5-star hotel chain.
- Cleaned and transformed data using the 3-sigma rule for outlier removal and median imputation, then merged 5 fact/dimension tables to build an analysis-ready dataset.
- Answered 10 business questions, finding weekend occupancy (72.34%) sharply outpaced weekdays (50.88%) and that Mumbai led all cities in revenue (₹668.6M) despite lower occupancy and ratings than Delhi.
- Flagged heavy revenue dependence on third-party booking platforms over direct channels, surfacing a customer-acquisition-cost risk for management.

Expense Tracking System – Full-Stack Finance App *[Python | FastAPI | Streamlit | MySQL]*

[GitHub Repo](#)

- Designed and built a full-stack personal finance application with a FastAPI REST backend, MySQL database, and Streamlit frontend.
- Implemented category-wise and date-range expense filtering, monthly spend summaries, and input/date-range validation.
- Documented all REST endpoints via FastAPI Swagger UI and wrote automated tests (pytest) to validate core functionality.
